OUR MISSION

deSter is
a Gategroup
member
since 2002

At deSter, we believe in creating packaging solutions that go beyond just meeting industry standards. Located in different headquarters, deSter is a global leader in designing and manufacturing premium food packaging and service concepts for airlines, foodservice companies and food processors, and other industries. Our mission is to drive innovation while staying committed to sustainability, ensuring that every product we craft is not only functional and stylish but also environmentally responsible.

As part of our ongoing effort to reduce environmental impact, we actively invest in developing eco-friendly materials and fully recyclable solutions. Our approach combines cutting-edge technology with a deep understanding of customer needs, allowing us to create high-quality, tailor-made packaging that enhances both the consumer experience and our commitment to a more sustainable world.

Welcome to deSter, where innovation and sustainability meet to shape the future of packaging.

ABOUT deSter

deSter operates globally, with key locations in the United States, Europe and Asia. One of its primary production hubs is in Lima, Ohio, USA. This strategic location allows deSter to serve North American clients efficiently, providing shorter lead times and faster deliveries.

Being based in Lima also enables close collaboration with major airlines, foodservice companies and food processors in the region, ensuring tailored solutions that meet local market demands.

Prachinburi

deSter, headquartered in Hoogstraten – BE, has production units in Hoogstraten (BE), Lima (OH, US), Prachinburi (TH), and Barcelona (SP), in addition to global warehousing activities and sales offices.

In addition to Lima, deSter's presence in Hoogstraten, Belgium, serves as its European headquarters, driving innovation and sustainability efforts. The company also has a significant footprint in Asia, ensuring a truly global reach. Having facilities across continents enables deSter to stay agile and competitive, meeting the unique needs of diverse markets.

This global presence provides a significant advantage, allowing deSter to leverage regional expertise while maintaining consistent quality worldwide. It also enhances the company's ability to adapt quickly to market trends, ensuring continuous innovation and customer satisfaction across borders.

LIMA FACTORY

OUR AMERICAN BASE

deSter's production facility in Lima specializes in creating high-quality food packaging solutions for the American market, offering both single-use and reusable products.

The facility employs three key manufacturing methods: extrusion, thermoforming, and injection molding.

In extrusion, raw plastic is melted and shaped into sheets or films, which serve as the base material for further processing. These sheets are then thermoformed into products like polypropylene (PP) clamshells, commonly used for packaging salads, sandwiches, and other food items.

Alongside thermoforming, injection molding is a crucial part of the production process. This method allows for the creation of both single-use and reusable items, such as durable PP cutlery and reusable food containers.

Injection molding involves injecting molten plastic into molds, producing intricate designs ideal for high-use products. The use of PP ensures these products are lightweight, strong, and resistant to high temperatures, making them suitable for both dine-in and takeaway meals.

deSter's packaging solutions emphasize convenience and functionality, with features like secure closures and stackable designs for easy transportation.

The Lima facility follows strict quality control measures to ensure all products are food-safe and meet customer expectations. By adhering to these high standards, deSter ensures its packaging solutions are widely used by restaurants, catering companies, and other food service providers across the U.S. market.

ECOVADIS PLATINUM

AWARD FOR SUSTAINABLE SOLUTIONS

EcoVadis stands as a leading global authority in evaluating Social and Environmental (ESG) performance, offering a comprehensive assessment and guidance on sustainability practices. With a vast network encompassing over 100,000 rated companies across diverse sectors, EcoVadis is renowned for its impartiality and reliability.

Employing a robust methodology grounded in internationally recognized sustainability benchmarks such as the Global Reporting Initiative (GRI), the United Nations Global Compact, and ISO 26000, EcoVadis scrutinizes companies' initiatives and outcomes through a structured approach of Policies, Actions, and Results.

The assessment framework spans four critical domains: Environment, Labor & Human Rights, Ethics, and Sustainable Procurement, providing a holistic view of companies' sustainability efforts.

Attaining the prestigious Platinum rating signifies deSter members' steadfast commitment to embedding sustainability throughout its operations and supply chain, thus fostering a positive impact on both the environment and society at large. In essence, EcoVadis offers a comprehensive evaluation of our business practices, driving us towards a future characterized by environmental stewardship and social advancement.

CUSTOMIZE

CUSTOMIZED DESIGN

WHATEVER YOU CAN IMAGINE

CUSTOMIZE EXISTING PACKAGING

At our production facility in Lima, food packaging can be fully customized to meet specific brand requirements. One option is adding color to the packaging, which can help create a distinctive look that aligns with a company's brand identity. In addition, we can emboss logos directly onto products like PP clamshells or cutlery, providing a professional, high-quality branding solution that reinforces recognition without the need for labels.

DESIGN YOUR OWN PACKAGING

For companies looking for a completely unique solution, we offer the option to start from scratch with a custom design.

Our team of experts can work closely with clients to develop a packaging concept that fits their

exact needs, including unique shapes or functional features. The thermoforming process allows for flexibility in the design, making it easy to adjust packaging size, shape, or even material thickness to match product specifications.

AESTHETICS vs. FUNCTION

Beyond aesthetics, we also consider practical aspects like durability and stackability to ensure that the packaging is not only attractive but functional. The use of color and logo embossing doesn't compromise the structural integrity of the packaging, maintaining its quality for safe food contact.

Customization can also include eco-friendly options, allowing brands to align with sustainability goals.

With these possibilities, we help companies create packaging that stands out in the contemporary competitive American food market.
